FOOD CONSUMPTION OF HOUSEHOLDS BY MONEY VALUE OF FOOD AND QUALITY OF DIET

UNITED STATES,
NORTH,
SOUTH

U.S. Department of Agriculture
Agricultural Research Service

ACKNOWLEDGMENTS

The 1965-66 nationwide survey of household food consumption was conducted by the Consumer and Food Economics Research Division, Agricultural Research Service, U.S. Department of Agriculture. The sample was designed and the data were collected and processed by National Analysts, Inc., under contract with the Department. The data were tabulated by General Electric Company, also under contract with the Department.

Constance Ward had major responsibility for preparation of this report. Marguerite C. Burk and Betty Peterkin collaborated in its planning and composition. Daniel A. Swope, Chief, Food Consumption Branch, had overall responsibility for publication of the report.

FOOD CONSUMPTION OF HOUSEHOLDS BY MONEY VALUE OF FOOD AND QUALITY OF DIET--UNITED STATES, NORTH, SOUTH

By Consumer and Food Economics Research Division, Agricultural Research Service

INTRODUCTION

This report presents data from the nationwide survey of food consumption made by the U.S. Department of Agriculture in 1965-66 describing variations in food consumption and dietary levels among households grouped by level of money value per person for food at home.

The money value of food includes the value of food bought at prices reported by households plus food that was home produced or received as gift or pay (including federally donated food) valued at retail prices. A "person" was defined to be equivalent to 21 meals in a week from home-food supplies. The total money value of food at home for the household was divided by the number of 21-meal-at-home-equivalent persons to determine the money value of food per person. Households were then grouped into eight money value categories ranging from less than \$3 to \$20 or more per person in a week.

Data on food consumption and dietary levels by money value categories are given separately for the United States and two broad regions--the South and the North, which includes the Northeast, North Central Region, and West. Information is given for urban, rural nonfarm, and rural farm households in each region. Also, food consumption of households with diets graded as "good" and "poor" is shown for three money value categories.

The data were collected by personal interview with household members, usually the homemaker. Experienced interviewers were schooled in the collection of data for the survey. They used a detailed food list to help homemakers recall the kinds, quantities, and costs of food (including alcoholic and other beverages) used at home in the 7 days preceding the interview. Descriptive information on households was collected for classification purposes, including household composition and income and age, education, and employment of the homemaker.

As in earlier USDA surveys, quantities of most foods were measured in the form in which they came into the kitchen. Thus, data in this report are based on economic consumption rather than quantities of foods actually eaten.

The nutritive value of food reported used during the week was calculated from tables of food composition, mostly those in "Composition of Foods--Raw, Processed, Prepared," U.S. Department of Agriculture, Agriculture Handbook No. 8. Estimates of average vitamin losses during cooking were deducted from food composition values before they were applied to the food quantities.

Diets were classified as good or poor on the basis of the 1963 Recommended Dietary Allowances of the Food and Nutrition Board, National Academy of Sciences-National Research Council. These allowances are daily calorie and nutrient intakes judged by the scientists of the Board to be adequate for maintaining good nutrition in essentially all healthy persons in the United States under current conditions of living. The allowances provide for a margin of sufficiency above physiological requirements for each nutrient, but not for calories, to cover variations in needs among individuals.

In this survey, a diet was rated good if the nutritive value of the total food used by the household during the week equaled or exceeded the total allowance for each of seven nutrients for all persons eating from the household food supply. A diet was rated poor if it supplied less than two-thirds of the allowances for one or more nutrients. Two-thirds of the allowance has been considered in this and other household surveys of the Department as a level below which diets could be nutritionally inadequate for individuals over an extended period of time.

The nutritive value of the household food supply used in rating diets included not only values of foods eaten by household members but also edible foods that were discarded in the kitchen and plate waste at the table. Therefore, these data probably overestimate the number of household diets that met allowances.

No information was obtained on how food was distributed among family members. Unless it was divided according to nutritional need, some members of the family might not have had diets that met allowances even though the household diet was rated good. On the other hand, if the household food supply did not provide the total allowance for the family, some, if not all, members had diets that did not meet allowances.

RESULTS

The average money value of food used at home by U.S. households surveyed in 1965-66 was \$28.70 per household, or \$8.80 per person in a week. Seventy percent of the households used food with a money value between \$5 and \$12 per person. Fewer than one-tenth of the households used food worth less than \$5, and one-fifth used food worth more than \$12.

Differences by Money Value of Food

Food Use

At each successively higher money value level, households used larger average quantities of the major food groups. This was not necessarily true for each item within the group, however. High money value households used much larger quantities of meat, fresh and frozen fruits and vegetables, and beverages. The most marked difference between the high- and low-money value levels was in the use of alcoholic beverages. For example, households using food valued at \$12 to \$16 per person used five times as much alcoholic beverages, costing nine times as much, as households using food worth \$5 to \$7. Other foods that were used in much larger amounts in higher money value groups included skim fluid milk, cream, cottage cheese; salad and cooking oils; beef steak and roasts, veal, lamb, shellfish; and citrus fruit, melons, and berries. Some foods for which consumption was lower at the higher money value levels were canned and dry milk; vegetable shortening; flour and cornmeal; salt pork; dried beans; and baby foods.

Variations in food consumption reflected, in part, differences in the makeup of the households in the various money value categories. Households using food with a high money value tended to be smaller and had proportionately fewer children. Therefore, these households, for example, used less baby food but more alcoholic beverages.

Division of the Food Dollar

In households with food costing \$12 to \$16 per person, the largest share of the food dollar went for meat. About the same share of each dollar was allocated to milk and milk products as to beverages other than milk. However, in this relatively high money value group, most of the food was eaten by adults, many of whom would be likely to consume beverages in addition to milk. These households used 6 cents more of the dollar for fresh than for processed vegetables and fruits. They used less of each dollar for bread than for other bakery products—3 cents compared with 5 cents.

Households using food costing \$5 to \$7 also apportioned the largest share of each dollar to meat. Bread and other bakery products accounted for a little over 4 cents each. Families in this group allocated twice as much to milk and milk products as to beverages. The greater use of milk is related to the large proportion of young children in these households.

The proportion of the food dollar that went to the major food groups in households using food at various levels of money value per person in a week follows:

Food group	Money value level			
	\$5.00-\$6.99	\$7.00-\$8.99	\$9.00-\$11.99	\$12.00-\$15.99
	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>
Milk, cream, cheese	14	14	13	12
Meat, poultry, fish, eggs.	35	36	37	37
Flour, cereal	5	4	3	3
Bakery products	9	8	8	8
Vegetables, fruit	18	18	18	18
Beverages	7	8	9	11
Other	12	12	12	11
Total	100	100	100	100

At high-money value levels, households in the North divided their food dollar in much the same way as those in the South. If money value of food was low, northern households used more of the dollar for milk and milk products and slightly less for grain products than southern households.

Farm and urban households using food worth \$12 to \$16 allocated their food money differently. On farms, 22 cents of each food dollar went for vegetables and fruits compared with 18 cents in urban areas. Beverages accounted for 6 cents of the farm food dollar, but 12 cents of the urban. The other food groups received approximately the same share in farm and urban places. Farm and urban families using \$5 to \$7 per person for food showed no appreciable difference in their division of the food dollar among the major food groups.

Nutrients From a Dollar's Worth of Food

Households with food valued at \$5 to \$7 per person in a week had greater returns in calories and nutrients per food dollar than households with higher cost food. Nutrients furnished by a dollar's worth of food used by households at various levels of money value are shown as follows:

Money value level	Food energy	Protein	Calcium	Vitamin A value	Ascorbic acid
	<i>Cal.</i>	<i>G.</i>	<i>Mg.</i>	<i>I.U.</i>	<i>Mg.</i>
\$5.00-\$6.99	2,990	97	1,094	6,580	87
\$7.00-\$8.99	2,670	87	952	6,100	84
\$9.00-\$11.99	2,400	80	860	5,850	82
\$12.00-\$15.99	2,190	73	738	5,570	79

A higher average return in nutrients per food dollar for households with low money value for food does not necessarily mean that they consciously chose more nutritious foods than households using more costly foods. Low-cost diets usually include some relatively low-cost foods that are bought in large quantities. Several of these foods—such as enriched flour, cornmeal, bread, nonfat dry milk, some cereals, dry beans, and potatoes—furnish substantial amounts of certain nutrients.

Dietary Levels

Average amounts of food used by households in money value-of-food categories over \$5 per person in a week were sufficient to provide diets exceeding Recommended Dietary Allowances set in 1963 for calories and protein; for the minerals—calcium and iron; and for the vitamins—vitamin A value, thiamin, riboflavin, and ascorbic acid. Averages, however, do not describe the dietary situation fully. Only one-fourth of the households using food worth \$5 to \$7 per person in a week had diets that met the RDA's for all nutrients studied. More than three-fourths of those in the \$12 to \$16 category met allowances. When diets failed to meet allowances, nutrient shortages occurred most frequently in calcium, vitamin A value, and ascorbic acid. Few diets of households using food worth less than \$5 per person furnished recommended amounts of nutrients, and only 30 percent of them provided two-thirds of the recommended amounts for all nutrients.

The percentages of household diets providing at least two-thirds of the recommended allowances follow:

Nutrient	Money value level			
	Less than \$5.00	\$5.00-\$6.99	\$9.00-\$11.99	\$12.00-\$15.99
	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>
All of 7 nutrients	30	68	93	96
Protein	91	100	100	100
Calcium	63	88	98	98
Iron	87	99	100	100
Vitamin A value	62	87	98	99
Thiamin	89	98	100	99
Riboflavin	90	100	100	100
Ascorbic acid	53	84	96	99
Food energy	88	99	100	100

Differences by Quality of Diet and Money Value of Food

About 70 percent of U.S. households studied used from \$5 to \$12 worth of food per person per week in 1965-66. Of these households, 46 percent had diets that met the recommended allowances for all nutrients studied (good diets); and 17 percent had diets that failed to provide two-thirds of the allowance for one or more nutrients (poor diets). Proportionately more good and fewer poor diets were at each of three successively higher money value levels as shown by the following:

Money value level	Good diets	Poor diets
	<i>Percent</i>	<i>Percent</i>
\$5.00-\$6.99	22	32
\$7.00-\$8.99	44	15
\$9.00-\$11.99	65	7

Households with good diets tended to be larger and to serve more meals to children than households with poor diets at the same level of money value per person. These differences in size and composition of households reflect the food cost advantages associated with feeding more persons and with feeding young children whose food needs can be met at lower cost than those of adults.

For most money value categories, a higher percentage of good diets was found among farm than urban households and among southern than northern ones.

Variations at the Same Money Value Level

At each money value level, households having good diets used a larger share of their food dollar for milk and milk products and vegetables and fruit than households having poor diets. On the other hand, the more expensive items—meat and alcoholic beverages—took a greater proportion in households having poor diets. Little difference existed in the shares going to other foods.

The higher expenditure for the meat, poultry, and fish group, however, did not directly result in the poor diets found in these households. In fact, almost all (96 percent) met at least two-thirds of the allowance for protein. But indirectly, their allocation of less of the food dollar for milk and milk products and vegetables and fruit resulted in the relatively low nutrient levels observed most frequently for calcium, vitamin A value, and ascorbic acid.

The percentages of the food dollar used by households with good and poor diets using food worth \$5 to \$7 and \$9 to \$12 are shown below:

Food group	\$5.00-\$6.99		\$9.00-\$11.99	
	Good diets	Poor diets	Good diets	Poor diets
	<i>Pct.</i>	<i>Pct.</i>	<i>Pct.</i>	<i>Pct.</i>
Milk, cream, cheese	16	13	14	10
Meat, poultry, fish	28	35	32	40
Eggs, dry legumes, nuts	6	6	5	5
Vegetables, fruit	21	16	21	14
Grain products	14	14	12	11
Alcoholic beverages	1	2	2	6
Other	14	14	14	14
Total	100	100	100	100

Households with good diets used larger quantities per person of all food groups except meat, poultry, and fish and beverages than households with less nutritious diets at the same money value level. Moreover, their choices within groups contributed meaningfully to the quality of their diets. Households with good diets used one-half cup more milk (calcium equivalent) per person per day than households with poor diets at each money value level. Households with good diets used one-fourth to one-half pound more vegetables per person per day, including much more dark-green and deep-yellow vegetables and tomatoes, and 1 to 1-2/3 cups more citrus fruit in terms of juice equivalent than their counterparts with poor diets.

Variations at the Same Diet Quality Level

Some families achieved good diets for less money than others. At the \$9 to \$12 money value level, families that had good diets used more of each of the major food groups and made more costly selections within the groups than families that had less costly good diets. The quantities of food used per person per week and the price per unit paid by households with good diets at various money value-of-food levels follow:

Food group and unit	Quantity of food			Price per unit		
	\$5.00- \$6.99	\$7.00- \$8.99	\$9.00- \$11.99	\$5.00- \$6.99	\$7.00- \$8.99	\$9.00- \$11.99
Milk, cream, cheese (calcium equiv.). qt . .	4.4	4.8	5.3	<i>Cents</i> 0.230	<i>Cents</i> 0.258	<i>Cents</i> 0.276
Meat, poultry, fish lb . .	3.1	3.9	5.0	.554	.620	.672
Vegetables, fruit lb . .	8.5	10.1	12.1	.156	.165	.177
Grain products (flour equiv.). lb . .	2.7	2.8	2.9	.324	.377	.437

The homemaker's choice of foods played an important role in the family's diet adequacy. Families using food worth \$5 to \$7 per person in a week used a larger share of the food dollar for milk and milk products and vegetables and fruits than households spending more. They allocated less of the dollar to meat and some other foods. The food groups receiving the larger share of the dollar were those that usually provide a high percentage of critical nutrients—calcium, vitamin A value, and ascorbic acid. Enriched grains also contributed significantly to the nutritional quality of diets for good diet households in the \$5 to \$7 category by supplying some essential nutrients inexpensively.

GENERAL NOTES ON USE OF TABLES

The following notes contain information and explanations applicable to several tables. In addition, specific table notes, which appear after the tables, refer to a particular table, group of columns, or a single column of a table. Items to which specific notes refer are marked by the symbol ‡ on the table.

1. Component items may not add to totals because often the data for one or more component items are not given or because of rounding.
2. Data refer to food used at home during the week from all sources—purchased, home produced, and received as gift or pay.
3. The asterisk (*) indicates some, but less than ½ of the value of 1 in the last digit shown in the column.
4. See table 4 for food group totals for tables 5-19 and table 20 for food group totals for tables 21-35.
5. Homemade mixtures on hand at the beginning of the 7-day period, if used during the survey week, are included in prepared form rather than as ingredients. Data collected for all other foods are as they were brought into the kitchen. See Definitions and Explanations, "Food at Home."
6. Commercially canned food includes baby food.
7. Cooking losses have been deducted from all vitamin values.

8. Most data are shown as averages per person. Twenty-one meals from home-food supplies were counted as one person. The use of 21-meal-at-home-equivalent persons adjusts for those family members who may have eaten meals away from home and nonfamily members who may have eaten from household food supplies. See Definitions and Explanations, "Household Size in Equivalent Meals."

9. Nutritive values of diets in tables 39 and 52 are shown as averages per nutrition unit per day. Diets of households of different sizes and compositions can be compared when their nutritive values are presented on a nutrition-unit basis. See Definitions and Explanations, "Household Size in Equivalent Nutrition Units."

10. Data are not necessarily as precise as the amount of detail published may imply. Digits beyond significance are sometimes shown to enable users to regroup data.

11. Tables 4-19 are for quantities of food by marketing groupings and tables 20-35 contain the matching money value data. Tables 44-47 are for quantities of food by nutrition groupings and tables 48-51 contain the matching money value data. The column numbers are identical for each pair of tables. Specific notes pertaining to these tables are given only once. Data in both the marketing and nutrition group tables include food from all sources—purchased, home produced, and food received as a gift or as pay.

1/ The actual number of households scheduled was 15,112. Weights were used to compensate for the spring sample being 3 times the size of the samples for each of the other seasons. Expanded samples of farm households also required compensatory weights: 0.25 and 0.24 for North Central spring and summer respectively, 0.18 and 0.16 for South fall and winter respectively, and 0.20 for all other region-seasons. (See Sample Analysis, "Collection Counts" Report No. 12.) Percents were computed from weighted counts.

^{1/} The actual number of households scheduled was 15,112 of which 9,763 were in the North. Weights were used to compensate for the spring sample being three times the size of the samples for each of the other seasons. Expanded samples of farm households also required compensatory weights: 0.25 and 0.24 for North Central spring and summer respectively, 0.20 for North Central fall and winter, and 0.20 for all seasons in the Northeast and West. (See Sample Analysis, "Collection Counts" HFCS Report No. 12.) Percents were computed from weighted counts.

1/ The actual number of households scheduled was 15,112 of which 5,349 were in the South. Weights were used to compensate for the spring sample being three times the size of the samples for each of the other seasons. Expanded samples of farm households also required compensatory weights: 0.20 for spring and summer, 0.18 for fall and 0.16 for winter. (See Sample Analysis, "Collection Counts" HFCS Report No. 12.) Percents were computed from weighted counts.

* TABLE NOTES ON PAGES

ANNUAL 1965-1966

SPECIFIC TABLE NOTES

Table 2, 42.—Household Composition in Terms of Meals at Home

Col. No.	Heading	Notes
2	Total	Including refreshments to guests (equated to a meal basis) not included in other columns.
	Percent of total meals at home:	
5,12		Including pregnant and nursing mothers not shown separately.

Table 3, 43.—Money Value of Food, by Source

Col. No.	Heading	Notes
2	Household size	In equivalent persons; 21 meals at home equal one person.
4-9	At home	Including packed lunches and other food carried from home. See <u>Definitions and Explanations</u> , "Money Value of Food Used at Home."
8	Donated	Federally donated food only. Food from USDA's Direct Distribution Program issued to low-income families by State and local welfare agencies.
12	Snacks	Between-meal food and beverages; supplements to packed lunches.
13	Median income	Income for 1964 or 1965 after deduction of Federal and State income taxes.

Table 4, 20.—Food Group Totals

Col. No.	Heading	Notes
2	Milk, cream, cheese	Quantity of whole fluid milk to which dairy products (except butter) are equivalent in calcium.

Table 4, 20.—Food Group Totals—Continued

Col. No.	Heading	Notes
7	Poultry, fish	Also shellfish.
8	Eggs (fresh equiv.)	Including in-shell equivalent of liquid (yolks, whites, mixed yolks and whites) and processed eggs.
11	Fresh vegetables	Other than potatoes and sweetpotatoes. Also home canned and home frozen.
12	Fresh fruit	Also home canned and home frozen.
15	Juice: vegetable, fruit	Single-strength equivalent of frozen concentrated juice.
17	Beverages	Data for tea are for purchases rather than consumption.
18	Soup, other mixtures	Including baby food mixtures except formula.
19	Nuts, condiments, leavenings	Data for seasonings are for purchases rather than consumption. For selected seasonings, quantity is not included.

Table 5, 21.—Milk, Cream, Cheese

Col. No.	Heading	Notes
	Fresh fluid milk:	
3	Whole	Also goat; concentrated.
4	Skim	Also partly skimmed, low-fat, yogurt.
	Processed milk:	
5	Total (milk equiv.)	Quantity of whole fluid milk to which processed milk is equivalent in calcium.

Table 5, 21.—Milk, Cream, Cheese—Continued

Col. No.	Heading	Notes
7 . . .	Canned, evaporated	Also goat; nonfat; products such as Milnot, Topic.
10 . . .	Cream	Also cream substitute.
11 . . .	Frozen milk dessert	Ice cream, ice milk, frozen custard, milk shake, sherbet.
Cheese:		
13 . . .	American, natural	Cheddar; also Colby, Coon, Longhorn.
14 . . .	American, process	Cheddar; also Brick, Pimento.
15 . . .	Cottage	Also Ricotta, Bakers, Farmer, Dutch, Pot.

Table 6, 22.—Fats, Oils

Col. No.	Heading	Notes
3 . . .	Shortening	Lard and other types of shortening.

Table 7, 23.—Flour, Cereals

Col. No.	Heading	Notes
Prepared flour mix:		
6 . . .	Biscuit, roll, muffin	Also bread, cornbread mixes.
7 . . .	Cake	Including coffee cake, cheese cake, boston cream pie mix.

Table 7, 23.—Flour, Cereals—Continued

Col. No.	Heading	Notes
Breakfast cereal:		
10 . . .	Cold	Plain or with added sugar, fruit, nuts, or other grain. Including baby cereal.
Other cereals, pastes:		
14 . . .	Macaroni, other pastes	Spaghetti, noodles, pastina, dry spaghetti dinner, spaghetti with seasonings.

Table 8, 24.—Bakery Products

Col. No.	Heading	Notes
All columns include products that are ready-to-eat, partly baked, and batters and doughs, but exclude prepared flour mixes.		
Bread:		
3 . . .	White	Including egg, cheese, potato, soya, high-protein bread.
Other bakery products:		
4 . . .	Total	Cols. 5-12 and ice cream cones, blintzes, and toaster tarts.
5 . . .	Crackers	Unsweetened crackers, any grain; also corn chips, pretzels, chow mein noodles, cracker meal.
8 . . .	Cake	Including cheese cake, ice cream cake, ice cream cake roll, boston cream pie, gingerbread.
9 . . .	Pie	Also tarts, strudel, turnovers, piecrust, cream puffs, eclairs, french pastry.
10 . . .	Cookies	Also sweet crackers.
11 . . .	Coffee cake	Also sweet buns, sweet rolls, waffles, pancakes, danish pastry.

Table 9, 25.—Meat

Col. No.	Heading	Notes
	Fresh meat includes home-frozen and commercially frozen meat. All canned, cooked meats include both home canned and commercially canned.	
	Steak:	
4	Round	Including minute, cube, swiss.
6	Porterhouse	Also club, T-bone.
7	Other	Chuck, flank, rib, delmonico, tenderloin.
	Roast:	
9	Chuck	Also brisket, california, cross-cut, pot roast, shoulder.
12 . . .	Rump	Also top sirloin, sirloin tip.
13 . . .	Stewing	Also boiling beef for soup.
14 . . .	Corned, chipped, dried	Also pastrami.
15 . . .	Ground	Including beef with pork, veal, or other meat.
	Pork, cured, smoked:	
23 . . .	Ham	Including sliced boiled ham.
25 . . .	Salt pork	Including fatback, side pork, streak of lean; also cracklings, fresh jowls, pork skins.
26 . . .	Other	Boston butt, canadian bacon, chops, ham hocks, loin roasts, picnics, pickled pork products, sausage.
27 . . .	Canned, cooked	Including ham, bacon, sausage.
28 . . .	Veal	Including canned, cooked.
29 . . .	Lamb	Including canned, cooked.

Table 10, 26.—Poultry, Fish; Eggs; Sugar, Sweets

Col. No.	Heading	Notes
	Poultry:	
2-5		Including canned, frozen, cooked.
	Fish, shellfish:	
5	Total	Cols. 6-9 and smoked, pickled, and dried fish.
6	Fish, fresh	Also home-canned and home-frozen, cooked; roe, frog legs, turtle.
9	Shellfish	Including canned, frozen, cooked.
10 . . .	Eggs, fresh equiv.	Including in-shell equivalent of liquid and processed eggs not shown separately.
	Sugar:	
11 . . .	Total	White, brown, maple, and baby formula sugar.
14 . . .	Jelly, jam	Including home-preserved and commercially preserved. Also preserves, marmalade, and fruit topping.

Table 11, 27.—Potatoes, Sweetpotatoes

Col. No.	Heading	Notes
	Fresh:	
3	White	Also home canned and home frozen.
4	Sweetpotatoes	Also home canned and home frozen.
8	Commercially frozen	Including cooked and raw.
9	Dried	Also potato pancake mix.

Table 12, 28.—Fresh Vegetables

Col. No.	Heading	Notes
All columns include home-canned, home-frozen, and cooked vegetables.		
2,3 ...	Dark green	Leafy greens such as spinach, kale, collards, mustard greens; broccoli, green peppers.
Deep yellow:		
5	Carrots	Also carrots and peas.
Other green:		
13 ...	Peas	English or green, black-eyed, field, cow, snowpeas.
Other vegetables:		
18,19 .	Onions	Also garlic, chives, scallions.

Table 13, 29.—Fresh Fruit

Col. No.	Heading	Notes
All columns include home-canned, home-frozen, and cooked fruit.		
Other Vitamin C-rich:		
7	Cantaloup	Also muskmelon, persian melon, papaya.
Other fruit:		
11 ...	Bananas	Including plantain.
13 ...	Melons except cantaloup	Watermelon, casaba, honeydew, mixed melon balls; other melons except melons in column 7.

Table 14, 30.—Commercially Canned Vegetables, Fruit

Col. No.	Heading	Notes
All columns include dietary pack vegetables and fruits; fruit columns include fruit for pie filling.		
Vegetables:		
3	Dark green	Collards, kale, mustard greens, turnip greens, spinach, pimientos.

Table 14, 30.—Commercially Canned Vegetables, Fruit—Continued

Col. No.	Heading	Notes
4	Deep yellow	Carrots, carrots and peas, pumpkin, winter squash.
Other vegetables:		
5	Tomatoes	Also aspic, paste, puree; tomatoes with other vegetables.
Beans:		
8	Baked	Also mature beans and peas, lentils, with or without pork.
9	Snap	Green, wax, or yellow; shellie beans.
10 ...	Beets	Also beets and greens.
12 ...	Green peas	Also immature field peas and black-eyed peas; snowpeas.

Table 15, 31.—Commercially Frozen Vegetables, Fruit

Col. No.	Heading	Notes
All vegetable columns include vegetables with butter, cream, cheese sauce, nuts, mushrooms, or other additions.		
Vegetables:		
3	Dark green	Collards, kale, mustard greens, turnip greens, spinach, peppers.
4	Deep yellow	Carrots, carrots and peas, pumpkin, winter squash.
Other vegetables:		
7	Snap beans	Green, wax, or yellow; also broad and Italian.
9	Green peas	Also black-eyed peas, snowpeas.
10 ...	Fruit	Mostly strawberries.

Table 16, 32.—Juice—Vegetable, Fruit; Dried Vegetables, Fruit

Col. No.	Heading	Notes
6-8 ...	Frozen fruit juice	Concentrated commercially frozen; single-strength home-frozen.

Table 16, 32.—Juice—Vegetable, Fruit; Dried Vegetables, Fruit—Continued

Col. No.	Heading	Notes
9	Fresh juice	Mainly citrus.
	Dried vegetables and dried fruit:	
10-15		Columns include home-dried and commercially dried vegetables and fruit. Canned, frozen, and cooked items are also included except for commercially canned dry beans (tables 14 and 30).
15	Raisins	Also currants.

Table 17, 33.—Beverages

Col. No.	Heading	Notes
	Tea (purchases):	
5-7		Data are for purchases during 7-day period rather than consumption.
8	Cocoa, chocolate	Including cocoa without dry milk; baking chocolate, chocolate sirup, or topping.
9,10, 11-14		Including home prepared.
9	Soft drink	Ginger ale, cola, fruit drinks, club soda, diet drinks.
10 . . .	Fruit ade, drink, punch, nectar.	Ready-to-drink (canned, bottled, fresh), powdered, concentrated.
13 . . .	Whisky, gin, rum	Also vodka.
14 . . .	Wine	Including champagne, vermouth; also ready-mixed cocktails.

Table 18, 34.—Soup, Other Mixtures

Col. No.	Heading	Notes
	Soup, sauce, gravy:	
3	Ready-to-serve	Including commercially canned, home canned, home frozen, cooked.
5	Frozen	Commercial only.
6	Dry	Also bouillon cubes, granules, paste, powder.
7	Baby food mixtures . . .	Products such as milk and fruit pudding; vegetables with meat, cereal, egg.
	Other mixtures:	
8	Sweet	Gelatin, puddings, ices, popsicles, icing, meringue shells, junket tablets.
9	Not sweet	Mixtures other than baby food mixtures and sweet mixtures.

Table 19, 35.—Nuts, Condiments, Leavenings

Col. No.	Heading	Notes
	Nuts, peanut butter:	
4	Peanut butter	Also other nut butter.
	Condiments:	
5-8		Including home-prepared and commercially prepared.
6	Catsup	Also chili sauce, cocktail sauce.
9	Leavenings	Baking powder, yeast including brewers yeast.
10 . . .	Seasonings (purchases)	Data are for purchases during the 7-day period rather than consumption. Quantity omitted for extracts, flavors, meat sauce.

Table 36.—Household Size in Terms of Equivalent Nutrition Units

Col. No.	Heading	Notes
2	Equivalent persons . . .	Twenty-one meals from home supplies equal one person.
	Equivalent nutrition units:	
3-10	Household size in adult-male equivalent units (to permit comparison of diets of households of different sizes and composition). For each nutrient the number of such units was calculated using the 1963 Recommended Dietary Allowances to relate the needs of persons of different age and sex to those of the 20-35-year-old man.	

Table 44, 48.—Milk, Cream, Cheese; Vegetables, Fruit

Col. No.	Heading	Notes
	Milk, cream, cheese:	
2	Total (milk equiv.)	Quantity of whole fluid milk to which dairy products (except butter) are equivalent in calcium. Including mixtures mostly milk.
3	Milk, fresh and processed	Fresh fluid milk and quantity of whole fluid milk to which processed milk is equivalent in calcium.
	Vegetables, fresh and processed:	
6-11		Including vegetable juice.
6	Total	Sum of unconverted quantities of all components. Including mixtures mostly vegetable and plate dinners.
7	Potatoes (fresh equiv.)	Weight of fresh potatoes with skins plus pared and processed potatoes converted to equivalent weight of fresh potatoes with skin.

Table 44, 48.—Milk, Cream, Cheese; Vegetables, Fruit—Continued

Col. No.	Heading	Notes
8	Dark green	Spinach, kale, collards, mustard greens, turnip greens, broccoli, peppers, and other dark-green vegetables.
9	Deep yellow	Sweetpotatoes, carrots, pumpkin, winter squash, and other deep-yellow, vitamin A rich vegetables.
10 . . .	Tomatoes	Including tomato paste, sauce, catsup, soup, and relish.
11 . . .	Other	Including olives, pickles, relishes not tomato. Also ready-to-eat vegetable mixtures not shown separately.
	Fruit, fresh and processed:	
12-15		Including fruit juice.
12 . . .	Total	Sum of unconverted quantities of all components. Including ready-to-eat fruit mixtures not shown separately.
13 . . .	Citrus, (juice equiv.)	Weight of single-strength juice plus equivalent juice of fresh citrus fruit and concentrated citrus juice.
14 . . .	Other vitamin C-rich	Including cantaloup, papaya, strawberries, and other fruit rich in vitamin C. Excludes melons other than cantaloups and berries other than strawberries.

Table 45, 49.—Meat, Poultry, Fish; Other Protein Food

Col. No.	Heading	Notes
	Meat, poultry, fish:	
8	Other meat	Including veal, lamb, game, other variety meat.
	Other protein food:	
11 . . .	Total	Including plate dinners not shown separately.
12 . . .	Eggs (fresh equiv.) .	In-shell equivalent of liquid and processed eggs.

Table 46, 50.—Grain Products

Col. No.	Heading	Notes
2,7 . . .	Total (flour equiv.)	Weight of flour, cereals, meals, and pastes plus dry weight of flour, cereals, meals, and pastes in prepared products and bakery products.
	Not enriched or whole grain:	
7	Total (flour equiv.)	Including plate dinners not shown separately.

Table 47, 51.—Fats and Oils, Sugar and Sweets, Other Food

Col. No.	Heading	Notes
	Sugar, sweets:	
8	Total (sugar equiv.)	Weight of sugar, sirup, jelly, and candy plus sugar equivalent of soft drinks, ades, punches, beverage and dessert powder, and prepared desserts.
10,11 . .	Other sweets (sugar equiv.) . . .	Sugar equivalent weight of soft drinks, ades, punches; beverage and dessert powders, and prepared desserts.

Table 47, 51.—Fats and Oils, Sugar and Sweets, Other Food—Continued

Col. No.	Heading	Notes
	Other food:	
12 . . .	Total	**Indicates that data are not available.
14 . . .	Some nutritive value	Including yeast, baking powder, coffee, coffee substitute, tea, cocoa, baking chocolate, chocolate sirup.
15 . . .	No nutritive value	Including vinegar, salt, artificial sweeteners, meat extracts, soya sauce, meat tenderizer, vanilla, other flavorings, pepper, spices, herbs, soda, cream of tartar, similar products.

Table 56, 57.—Money Value and Nutrients by Food Group

Col. No.	Heading	Notes
1	Food group	See notes for tables 44 to 51 for some, but not necessarily all, items included in food groups.

DEFINITIONS AND EXPLANATIONS

All sources.—Includes food used during the week from the following sources: (1) Bought with cash, credit, food stamps, coupons, or food vouchers; (2) home produced; (3) federally donated; and (4) received as gift or pay; that is, food received as a gift from persons outside the household, as payment for services rendered, or received from a private or public welfare agency.

All urbanizations.—See "Urbanization."

Citrus juice equivalent.—Includes weight of single-strength citrus and blended citrus juice plus juice weight of fresh citrus fruit and commercially frozen or canned

concentrated citrus fruit juices converted to their equivalent single-strength juice weight. Source of most factors: "Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products," U.S. Department of Agriculture Statistical Bulletin No. 362, June 1965.

Dietary quality.—An assessment of the nutritive value of foods used at home in relation to the Recommended Dietary Allowances of household members adjusted for the number of meals eaten away from home. A diet was termed good when its nutritive value equaled or exceeded the recommended allowance for each of the seven nutrients for all persons eating in the household. When a diet supplied less

than two-thirds of the recommended allowance for one or more nutrients, it was rated poor. Between the households with good and poor diets were those that provided less than the allowance for at least one nutrient but at least two-thirds of the allowance for all seven nutrients. Such diets were sometimes labeled fair. See "Household Size in Equivalent Nutrition Units," and "Recommended Dietary Allowances."

Eggs, fresh equivalent.—Includes dozens of fresh eggs plus frozen, dried, or liquid eggs without shell, whether the whole egg, whites, or yolks only, converted to equivalent amounts of whole eggs in shell on a weight basis. Source of most factors: "Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products," U.S. Department of Agriculture Statistical Bulletin No. 362, June 1965.

Farm.—See "Urbanization."

Flour equivalent.—The product weight of flour, meal, cereals, and pastes, plus the weight of the dry flour, meal, cereals, and pastes in prepared flour mixes, bakery products, and other mixtures of which the predominant ingredients were from grain. The flour equivalent of the mixed foods ranged from 20-60 percent of the product weight. Source of most factors: "Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products," U.S. Department of Agriculture Statistical Bulletin No. 362, June 1965.

Food at home.—Food and beverages (alcoholic and nonalcoholic) used during the 7 days before the date of the survey interview, whether bought or received without direct expenditure. Included were food and beverages (1) eaten at home, (2) carried from home in packed meals, (3) thrown away, and (4) fed to pets. Excluded from food at home were (1) commercial pet food and household food fed to animals raised for commercial purposes and (2) food that was given away for use outside the home, such as food sent to sons in the military service, gifts of food donated to a church supper, and food given to household help to take home.

Food used at home was classified as fresh, canned commercially or at home, frozen commercially or at home, and dried or dehydrated. Generally, the food used at home was classified in the form brought into the kitchen. Homemade mixtures used during the survey week were recorded (1) as ingredients if prepared during the survey week or (2) as the product if prepared before the survey week.

Home-canned food.—A product canned at home before the survey week whether home processed by the respondent or by someone else who gave or sold the canned food to the respondent. Homemade jelly, marmalade, pickles, catsup, relish, and nut butter were considered home canned.

Home-frozen food.—A product frozen at home before the survey week whether home processed by the respondent or by someone else who gave or sold the frozen food to the respondent. To be considered home frozen, a food was frozen and

stored in a separate freezer—a homefreezer, a combination freezer-refrigerator with freezer sealed off, or a locker in a plant for storing frozen food.

Home-produced food.—Food raised for home use and food obtained by hunting, fishing, and gathering from the wild. Home-canned, home-frozen, and home-baked foods were not included unless the major ingredient was home produced.

Household.—A family or a group of unrelated persons who lived together, and their guests, boarders, and hired help. Included were persons who usually lived there but were away from home temporarily—on vacation, at school, or on a business trip, for example. Food information was not taken from a household unless at least one person had 10 or more meals from the household food supply during the 7 days preceding the interview.

Household size in equivalent meals at home (persons).—The number of 21-meal-at-home-equivalent persons in the household. All meals eaten at home during the week by family members, guests, boarders, or household help were added together and divided by 21. In counting the meals from household food supplies, the following procedures were used: (1) When a household member's morning, noon, or evening meals at home and away did not add to seven, skipped meals were assumed to be at home or away in the same proportion as reported meals. (2) Meals by members, in addition to three a day and refreshments and snacks, were counted as a part of the three meals. (3) Refreshments served to guests (not full meals) were counted as one-fourth or one-half meal depending on the number of items served. (4) Food carried from home supplemented by only beverage from other sources was counted as a home meal. (5) Food carried from home, supplemented by other food, was counted as one-half meal.

Household size in equivalent nutrition units.—The number of adult-male equivalent persons in the household, calculated separately for food energy and each nutrient based on the relative needs of household members. The need of the man, 25 years old as indicated by the Recommended Dietary Allowance (1963), was assumed to be 1.0 nutrition unit. Needs of other persons in equivalent nutrition units were calculated by dividing their allowances by the allowance for the man. For example:

Household member	Daily recommended allowance for—		Equivalent nutrition units	
	Food energy	Calcium	Food energy	Calcium
	<i>Calories</i>	<i>Grams</i>		
Man, age 25	2,900	0.8	1.00	1.00
Woman, age 25	2,100	.8	.72	1.00
Boy, age 9	2,400	1.1	.83	1.38
Girl, age 2	1,300	.8	.45	1.00

The size of the household in equivalent nutrition units was then determined, taking into account the number of meals each person had at home. An example of the calculations for food energy and calcium for one household follows:

Persons served	Meals at home during week	Equivalent nutrition units		Meals X nutrition units	
		Food energy	Calcium	Food energy	Calcium
Household meals:					
Man, age 25	14	1.00	1.00	14.00	14.00
Woman, age 25	18	.72	1.00	12.96	18.00
Boy, age 9	18	.83	1.38	14.94	24.84
Girl, age 2	21	.45	1.00	9.45	21.00
Guest meals, female, age 75	1	.48	1.00	.48	1.00
Total for the week	72	--	--	51.83	78.84

For this household, the size in equivalent nutrition units for food energy is 2.47 ($51.83 \div 21$) and for calcium, 3.75 ($78.84 \div 21$). The household size in 21-meal-at-home-equivalent persons is 3.43 ($72 \div 21$).

If standards of dietary quality other than Recommended Dietary Allowances set in 1963 by the Food and Nutrition Board are used, the household size in nutrition units and all tables on a nutrition-unit basis should be recomputed.

Milk equivalent.—Quantity of whole fluid milk to which dairy products (except butter) are equivalent in calcium content. Chief source of data on the calcium content of the various dairy products: "Composition of Foods—Raw, Processed, Prepared," U.S. Department of Agriculture, Agriculture Handbook No. 8, December 1963.

Money income.—Respondent's estimate of 1964 money income (after deduction of State and Federal income taxes) for spring and summer and 1965 money income for fall and winter within one of the income classes, by \$1,000 increments up to \$12,000, and by broader income ranges above \$12,000 up to \$25,000 or more. Income was counted for all persons living in the household who drew from a common fund for the major items of expense, such as food and housing, whether or not they ate at home during the week. Included were unmarried sons and daughters of any age living at home; persons usually a part of the family who were temporarily away from home—at school, at work, in the hospital, or on vacation; and other persons related or unrelated living with the family who drew from a common family fund for major items of expense.

Money value of food used at home.—Expenditures for bought food and money value of home-produced food and food received free of cost that was used during the survey week. Expenditures for bought food were based on prices reported as paid regardless of the time of purchase. Sales tax was excluded. Bought food with no price reported, home-produced food, and food received as a gift or instead of pay were valued using prices reported as paid for similar items by other families in the same region and urbanization. Federally donated foods were valued using aver-

age retail prices in the United States reported by the Bureau of Labor Statistics for use in its food price index.

Nutrition unit.— See "Household Size in Equivalent Nutrition Units" and "Nutritive Value of Diets Per Nutrition Unit."

Nutritive value of diets.—Nutritive values of all foods and beverages including alcoholic beverages and baking powder used. Nutritive content of food was calculated mainly from data on nutrients in the edible portion of one pound of food as purchased—"Composition of Foods," table 2. Homemakers provided descriptive information with regard to kind, process, inedible parts, and enrichment and fortification for matching the foods used with corresponding items in composition tables.

Before the food composition values were applied to the food quantities, estimated average losses in cooking for vitamin A value, thiamin, riboflavin, niacin, and ascorbic acid were deducted. Cooking losses were estimated from "Procedures for Calculating Nutritive Values of Home-Prepared Foods" U.S. Department of Agriculture, ARS 62-13, March 1966 and unpublished data.

The data include nutritive values of any edible food brought into the kitchen for household use but lost or discarded in storage, in preparation for cooking, and as plate or table waste. Therefore, the amount of nutrients given in tables of this report are undoubtedly larger than amounts in the food actually eaten. Minerals in water and minerals and vitamins from concentrates taken by individuals were not included.

Nutritive value of diets per nutrition unit.—Nutritive value of food used at home divided by the household size in nutrition units and by seven. See "Household Size in Equivalent Nutrition Units." When content of diets is presented on a unit-of-nutrient-need basis, diets of groups of households of varying size and composition can be compared and such households can be arrayed by the level of the nutrient content of their diets.

An adjustment for meals eaten away from home by family members was made through use of the number of meals at home only in the divisor. This adjustment assumes that an average meal away from home is equal nutritionally to a meal at home. Between-meal food eaten away from home is not included.

Nutritive value of diets per person.—Nutritive value of food used at home divided by the number of 21-meal-at-home-equivalent persons in the household. See "Household Size in Equivalent Meals at Home (Persons)." Nutrient content of diets is presented per 21-meal-at-home-equivalent persons to adjust for various sizes of households. An adjustment for meals eaten away from home by family members was made through use of the number of meals at home only in the divisor. This adjustment assumes that an average meal away from home is equal nutritionally to a meal at home. Between-meal food eaten away from home is not included.

Averages per person are generally satisfactory for comparisons among large population groups similar in composition by age and sex. For groups dissimilar in

composition, comparisons may be misleading because the food needs of groups of households may differ.

Person.—One person equals 21 meals at home. See “Household Size in Equivalent Meals at Home (Persons).” Average quantities and money value of food used per person by groups of households are per 21-meal-at-home-equivalent person.

Potato, fresh equivalent.—Weight of fresh whole potatoes plus weight of fresh pared, canned, frozen, and dried potatoes, and potato chips, soup, and salad converted to equivalent weight of fresh potatoes with skin. Source of most factors: “Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products,” U.S. Department of Agriculture Statistical Bulletin No. 362, June 1965.

Recommended Dietary Allowances.—Daily allowances for food energy and seven nutrients recommended by the Food and Nutrition Board, National Academy of Sciences-National Research Council, as normally desirable goals in planning practical dietaries.

The recommended allowances are judgments of nutrition experts who consider them, except for calories, well above minimal requirements but not necessarily optimal levels of intake. The margin over minimal requirements varies widely among nutrients. Two-thirds of the allowance has been considered in this and other household surveys of the Department as a level below which diets could be nutritionally inadequate for some individuals over an extended period of time. Height, weight, and other variables affect the nutrient requirements of an individual. Although the allowances do not constitute a precise tool for rating diets of persons or households individually, they do provide a satisfactory yardstick for evaluating diets of population groups. They also provide a tool for calculating nutrition units of households, which in turn permit comparison of nutrient content of food of households and groups of households dissimilar in composition.

Rural farm.—See “Urbanization.”

Rural nonfarm.—See “Urbanization.”

Sample design and analysis.—See HFCS 1965-66 Report No. 12.

Sugar equivalent.—Weight of sugar, sirup, jellies, and candies plus approximate sugar content by weight for selected foods high in sugar—liquid soft drinks: fruit ades, punches, drinks, nectars; dry pudding mixes; ready-to-eat gelatin dessert; and cake icing.

Survey week.—The continuous 7-day period just before the interview during which the reported food was used. An interview that occurred on Monday morning after breakfast, for example, covered the period from Monday morning a week earlier after breakfast to the interview time.

Survey year.—April through December 1965 and January through March 1966.

Urban.—See “Urbanization.”

Urbanization.—Distinction between urban and rural households was based on the size of place in which the dwelling was located. Within the rural category, distinction between farm and nonfarm households was based on the presence of a farm operator. Definitions are those used by the Department of Commerce for the Population Census (1960) and the Agriculture Census (1964).

All urbanizations: Composite of urban, rural nonfarm, and rural farm households appropriately weighted.

Urban: Households in places with at least 2,500 inhabitants and in closely settled fringe areas surrounding cities of 50,000 or more inhabitants.

Rural nonfarm: Households outside of urban places without a farm operator.

Rural farm: Households outside of urban places with a farm operator.

A farm operator was a person who at the time of the interview made decisions and controlled the operation of property consisting of (1) 10 or more acres yielding sales of at least \$50 in 1964 or (2) fewer than 10 acres yielding sales of at least \$250 in 1964 or (3) land expected to yield sales in 1965 meeting either of those specifications. The farm operator performed the labor himself or directly supervised it. He was an individual operator or had one or more partners and either owned or rented the property by cash or cropping arrangements. The operator's dwelling unit did not have to be located on the farm property.
